### **The Haploids by Jerry Sohl**

A doubled haploid (DH) is a genotype formed when haploid cells undergo chromosome doubling. Artificial production of doubled haploids is important in plant.

Background: Haploid plant material is considered as recalcitrant to organogenesis, propagation, and maintenance in vitro. However, sugar beet (*Beta vulgaris*).

I have combined two haploid *Saccharomyces cerevisiae* cultures (opposite mating types) in YPD and want to select only diploids without using solid media.

haploids were their low frequencies and genotype differences in response. Thus, research was directed at finding methods of producing haploids in crop.
