Sentence comprehension is mediated by content-addressable memory structures. Page: 1 2 3.

The author of this book demonstrates the adequacy of rule-based theories by

The key difference between the two approaches, however, is in the vocabulary of graph-theoretic concepts used. This processing cost associated with RC-initial accusative object NPs is directly predicted by surprisal and possibly by other expectation-based theories. In Experiment 2 we thus endeavor to achieve these latter goals, testing more precisely the word-by-word predictions of different theories and minimizing the possibility that spillover may obscure the origin sites of processing difficulty.

Extraposition is one mechanism that increases rightward growth shifting is the contrary, it can instantiate at least three distinct relations: direct object a type 2 object indirect object a type 3 object and sub-object a type 4 object. Each contribution

investigates a particular grammatical phenomenon as it relates to bilingual codeswitching data, mostly from a Minimalist perspective.
