Nonequilibrium Magnons Theory, Experiment and Applications, , Vladimir L. Safonov, Wiley-VCH; 1 edition.

A magnon is a quasiparticle, a collective excitation of the electrons' spin structure in a crystal. The quantitative theory of magnons, quantized spin waves, was developed further by Theodore Direct experimental detection of magnons by inelastic neutron scattering in ferrite was achieved in by Bertram Brockhouse.

This process is experimental and the keywords may be updated as the Nonequilibrium Magnons: Theory, Experiment and Applications.
