Destructive inundations of large rivers are seldom, if ever, produced by precipitation within the limits of the principal valley, but almost uniformly by sudden thaws or excessive rains on the mountain ranges where the tributaries take their rise. We're featuring millions of their reader ratings on our book pages to help you find your new favourite book.

This calculation yielded a disturbed area of 2. If we travel into other parts of

The sagacious Palissy—starting from the theory that all springs are primarily derived from precipitation, and reasoning justly on the accumulation and movement of water in the earth—proposed to reduce theory to practice, and to imitate the natural processes by which rain is absorbed by the earth and given out again in running fountains. Hence it is probable that they were carried to the oases by subterranean channels from the Nile. Primitive man had little occasion to fell trees for fuel, or for the construction of dwellings, boats, and the implements of his rude agriculture and handicrafts. Humphreys and Abbott, Report, pp. It frequently flooded the flats along the lower part of its course, and it was determined to divert it into the Lake of Thun.
